

## **Treating Psoriasis May Reduce Risk for Other Ills**

**This chronic skin disease can affect overall health, dermatologist says**

By Robert Preidt

Friday, July 29, 2016

FRIDAY, July 29, 2016 (HealthDay News) -- Treating the skin disease psoriasis might reduce your risk for other health problems as well, a dermatology expert says.

About 7.5 million people in the United States have the chronic skin disease. The inflammatory effects of psoriasis can affect the entire body, said Dr. Jashin Wu, director of dermatology research at Kaiser Permanente Los Angeles Medical Center.

"People with psoriasis, particularly those with more severe disease, have an increased risk for a variety of other health problems, including obesity, diabetes, high blood pressure, high cholesterol, stroke and heart attack," he said in an American Academy of Dermatology news release.

Psoriasis is characterized by red, raised patches of skin, or plaques, covered with silvery-white scales. It's also marked by itching, burning or soreness of the skin. It is not contagious.

"Psoriasis patients, even those with mild disease, need to be aware of how this condition affects their overall health," Wu added.

Treating skin inflammation in psoriasis patients may also lower inflammation in other areas of the body and reduce heart disease risk, he said.

All psoriasis patients should seek treatment for their skin disease, maintain a healthy weight and talk to their doctor about being screened for heart problems, Wu said.

"Managing your psoriasis is not just about improving your skin -- it's about caring for your entire well-being," he added.

The protocol being used in Germany with CellSonic VIPP is:

- Energy level 2 with the infinity head,
- apply gel in the usual way and then 50 shots/cm<sup>2</sup> on treated skin area,
- 4 treatments in total, minimum time between treatments 2 weeks.

No drugs. No side effects. The patient's preferred creams can continue to be used.

It could be that the treatment of psoriasis is affecting a systemic condition. This suggests the CellSonic VIPP is affecting the response of the immune system; something we observe in healing chronic wounds and repairing nerves.

Translation of an email received by our distributor in Germany:

Dear Mr. Würleitner,

Thank you for the opportunity to be treated by Cellsonic VIPP for psoriasis.

My life has now changed a lot because the treatment impacted positively on my disease and this was noticed by friends and relatives. For 20 years I had treatments with creams, Balneo phototherapy, radiation and taking special drugs which affected my health and work. Now all these problems of psoriasis and the side effects of the treatments have disappeared. 😊

I am so happy especially now in summer; I can wear short sleeved shirts, shorts and even a bikini without feeling ashamed. Gone is the high emotional stress.

Many thanks again. I hope many people like me can be made happy with CellSonic VIPP.

Yours  
Dominica Tillmann

**Betreff:** Danke !!!!

Hallo lieber Herr Würleitner,

erst einmal möchte ich mich für die Möglichkeit bedanken an Ihrer Studie zur Behandlung mit Stoßwellen bei Psoriasis teilnehmen zu dürfen.

Mein Leben hat sich sehr verändert, da sich die Behandlung auf mein Krankheitsbild so positiv ausgewirkt hat das dies sogar meinen Freunden/Verwandten und Bekannten auffällt. Psoriasisstellen die ich in 20 Jahren Behandlung mit Cremes, Balneo Phototherapie, Bestrahlungen, Einnahme diverser Medikamente die wiederum meine Gesundheit beeinträchtigten, nicht in den Griff bekommen habe - sind spurlos verschwunden 😊

Ich bin so glücklich über den Verlauf - gerade jetzt im Sommer kann ich kurzärmelige Shirts und kurze Hosen, ja sogar einen Bikini tragen ohne mich schämen zu müssen... die seelische Belastung war doch gerade dann sehr hoch.

Vielen lieben Dank nochmals .... ich hoffe das Sie noch viele Menschen wie mich mit dem Cellsonic Gerät glücklich machen können.

Ihre  
Dominica Tillmann
